

Healthy Yard Care

TO PROTECT THE QUALITY OF O'AHU WATERS

Overuse of fertilizers, excess yard waste, and erosion of bare soils contributes to contamination of your stream, wetlands, and ocean. It's easy to have a healthy, beautiful lawn in Hawai'i without fertilizer runoff or erosion. You can save money and time while protecting our environment and still have a healthy yard that looks great all year!

Please use your creative talents to create a public service announcement up to 2 minutes that encourages residents to make a pledge to level up their yard care practices and be a part of the solution.

Many hands make light work. Through our combined efforts, we can make a difference together!

We are excited to see your inspiring entries! If you have any questions, please contact:

Storm Water Quality Division

cleanwater@honolulu.gov • (808) 768-3248 • www.cleanwaterhonolulu.com

DETAILS TO INCLUDE IN YOUR PSA:

Pick one of the actions to take:

- Test Soil & Fertilize Responsibly
- Plant Bare Spots & Go Native!
- Dispose of Yard Waste Sustainably

Be complete in what to do and how the action helps to protect our waters

Where to learn more: bit.ly/YardCareOahu

Please NO submissions about rain barrels

The City and County of Honolulu's Department of Facility Maintenance is proud to be a category sponsor!
