

Youth Xchange 2024 Sponsored Category:

“A more resilient and sustainable Hawai‘i”

At Hawaiian Electric, our goal is 100 percent renewable energy for electricity by 2045. By achieving this, Hawai‘i will greatly reduce its dependence on imported oil. This will lower electric bills and provide a more resilient and sustainable environment for future generations.

Hawai‘i is the first state in the nation to set a renewable energy goal of 100%. But the utilities in Hawai‘i can’t make this happen alone. We must continue with the collaborative efforts that have gotten us this far, involving the utilities, state and local governments, business partners, communities and customers like you.

Apply your creativity on why 100% renewable energy for Hawai‘i is important for you, your peers, your family and our communities. Explore how we can all be part of the solution to achieve a more resilient and sustainable Hawai‘i. Submissions should be 30 seconds to 2 minutes.
